

Numerical astrophysics and geophysics seen from GENCI

Geoffroy Lesur

¹ Institut de Planétologie et d'Astrophysique de Grenoble/CNRS

I will present some statistics about the current usage of the national supercomputing centers by our community (CINES, IDRIS and TGCC), followed by a brief review about the novelties on GENCI machines: new calls and new machines. I will also highlight a few elements about how to write a good GENCI proposal.
