The Strasbourg astronomical Data Centre (CDS, Centre de Données astronomique de Strasbourg) is celebrating its 50th anniversary in 2022. This presentation will provide an overview of the CDS services in the context of Open Science and the FAIR principles of making data findable, accessible, interoperable and reusable. The evolution of the services over the lifetime of the CDS will be described, along with the goals and challenges for the future in particular in the areas of computation and the distribution of data.
